Spy Science – fingerprints

You will need:

A pencil, clear sticky tape, white paper, a magnifying glass (optional)

First, scribble on an area of the white paper with the pencil. This will be your stamp pad, so make sure it's big enough to press your finger in.

Rub your finger in your pencil 'stamp pad' Make sure you roll your finger on both sides to make sure you cover the whole fingerprint area.

Now place a piece of sticky tape over your finger. The sticky side of the tape will pick up your fingerprint

Press the tape onto a piece of white paper or white card

If you like, you can take a fingerprint for each of your fingers and label them.

If you have a magnifying glass, you can have a closer look at your fingerprints.
