

Mini moving windmill.

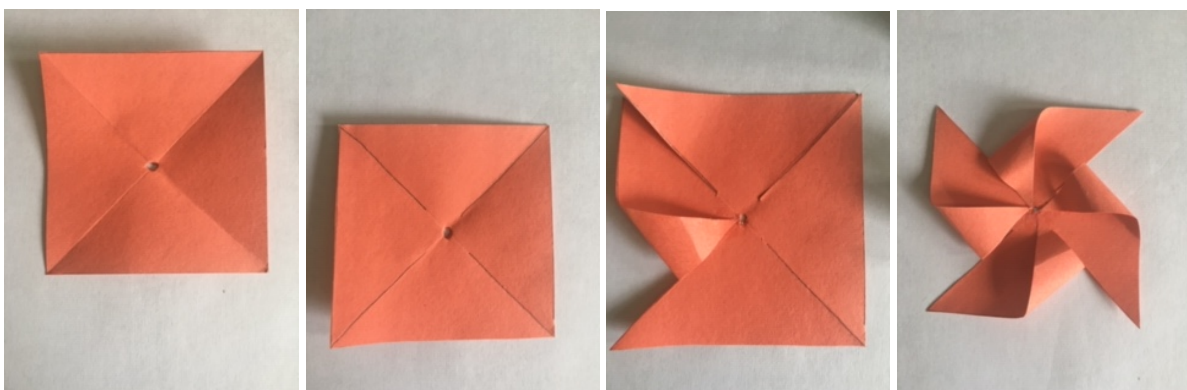

You will need: a cardboard tube, paint, glue, scissors, coloured paper, Sellotape and a straw.

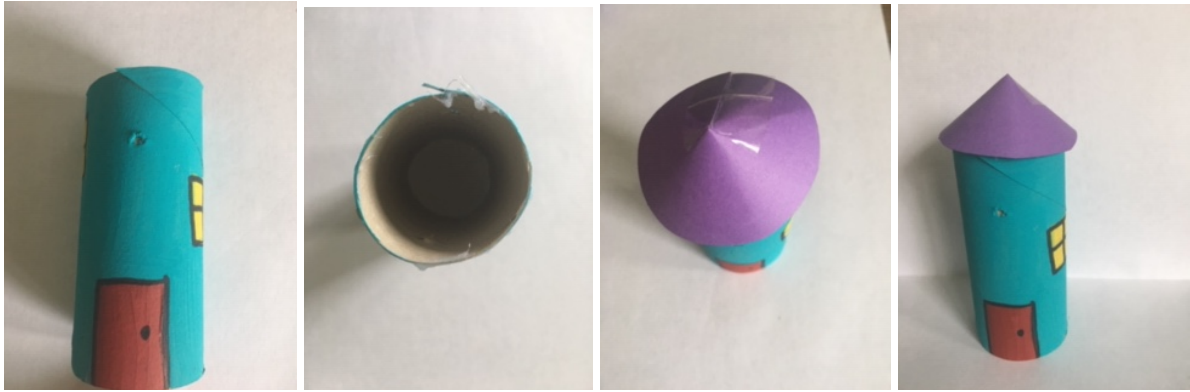

Make a small hole in your cardboard tube from one side to the other, then push your straw through to make sure it fits. Next draw windows and a door on your tube and paint them in your favourite colours.

Cut out circle using template and cut along the line to the centre, now gently roll in to a cone shape and tape in place.

Now take your square and make a small hole in the centre. Cut along the lines towards the centre then take a corner point and glue to the middle, repeat on each side as shown.

Draw on details to your windows and door. Glue around the top edge of the tube and then place the cone shape on top to make the roof.

Push the straw through the two holes you made in the tube making sure the bendy bit is at the back. Push on the windmill through the centre hole and cut down the straw to fit. Twist the straw at the back to make your wind mill turn.
